

Bloodborne Pathogen Training

1. EDUWHERE- Bloodborne Pathogens Training (http://www.eduwhere.com/c_bbp.cfm?r=g)

Bloodborne Pathogens

Description

This course provides training as required by OSHA's Bloodborne Pathogens Standard (29CFR 1910.1030). Material covered in the course includes definitions of bloodborne pathogens, modes of transmission, universal precautions, engineering and work practice controls, exposure control plans, hepatitis B vaccinations, and other information needed to ensure worker safety.

Note that the standard requires an opportunity for you to ask interactive questions and receive answers from the person conducting the training session. OSHA was asked if having a trainer available to answer any questions via email was considered to be in compliance with this requirement. In an interpretation letter OSHA states that “it is critical that trainees have an opportunity to ask and receive answers to questions where material is unfamiliar to them. Frequently, a trainee may be unable to go further with the training or to understand related training content until a response is received.” Therefore, it is OSHA’s policy that using an email system to answer questions is NOT considered direct access to a qualified trainer. If the qualified trainer is available through an interactive on-line exchange or via phone communication whenever a question arises, this is considered acceptable.

This training course complies with the requirement by having an online chat (AOL screen name: eduwhere) available at 9 am -11 am (Eastern Time) every Wednesday and a toll free number to call if you have questions (866-333-1092). Fee: \$ 125.00

2. Emergency University (<http://www.emergencyuniversity.com/>)

Includes access to Emergency University's online Blood Borne Pathogen training course for one full year. OSHA compliant.

- **Blood Borne Pathogen Training:** Interactive, audio/visual training program combining photographs, voice over, text, and animations designed to inform the trainee about universal precautions, the risks and types of infectious diseases contracted through exposure, the proper safeguards to prevent exposure and proper methods of handling potential contaminants.
- **Blood Borne Pathogen Testing:** Simple, multiple choice questions to ensure that the student has achieved basic knowledge required to prevent and properly handle potential exposures.
- **Approved by the Federal Occupational Health Agency**
- **Nationally recognized**
- **Meets OSHA guideline**
- **Printable certificate available upon completion of training and testing**
- **Experts available to answer your questions**

3. Professional Piercing Information Systems (<http://www.propiercing.com/index2.html>)

One day Infection Control and [Bloodborne Pathogen training](#). This class meets or exceeds the training standards for any state that requires such training. PPIS is accredited by a number of counties and states to deliver this industry specific training to body art practitioners in their jurisdiction. PPIS was the first program to include this training as part of its regular curriculum.

4. Bloodborne Pathogen Training Institute (<http://bbptraining.com/home.php>)

Online Program Includes Blood Borne Pathogens, Sterilization Methods and Infection Control Practices for Body Artists, Permanent Cosmetic Technicians and Piercers..

\$35

Includes a Certificate of Completion.
